2028_REC_OOPS using Java_Week 8_Q1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotException AtTheRateException DomainException

A typical email address should have a "." character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

Input Format

The first line of input contains the email to be validated.

Output Format

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

Sample Test Case

Input: sample@gmail.com

Output: Valid email address

Answer

```
import java.util.Scanner;
```

```
class DotException extends Exception {  
    public DotException(String message) {  
        super(message);  
    }  
}
```

```
class AtTheRateException extends Exception {  
    public AtTheRateException(String message) {  
        super(message);  
    }  
}
```

```
class DomainException extends Exception {  
    public DomainException(String message) {  
        super(message);  
    }  
}
```

```
public class Main {
```

```
    public static void validateEmail(String email) throws DotException,  
    AtTheRateException, DomainException {  
        int atCount = 0;  
        for (char ch : email.toCharArray()) {  
            if (ch == '@') atCount++;  
        }  
        if (atCount != 1) {  
            throw new AtTheRateException("AtTheRateException: Invalid @ usage");  
        }  
    }
```

```

int atIndex = email.indexOf('@');

if (email.startsWith(".") || email.startsWith("@") || email.endsWith(".") ||
email.endsWith("@")) {
    throw new DotException("DotException: Invalid Dot usage");
}

for (int i = 0; i < email.length() - 1; i++) {
    if ((email.charAt(i) == '.' && email.charAt(i + 1) == '.') ||
(email.charAt(i) == '@' && email.charAt(i + 1) == '@')) {
        if (email.charAt(i) == '.') {
            throw new DotException("DotException: Invalid Dot usage");
        } else {
            throw new AtTheRateException("AtTheRateException: Invalid @
usage");
        }
    }
}

String afterAt = email.substring(atIndex + 1);
if (!afterAt.contains(".")) {
    throw new DotException("DotException: Invalid Dot usage");
}

int dotCountAfterAt = 0;
for (char ch : afterAt.toCharArray()) {
    if (ch == '.') dotCountAfterAt++;
}
if (dotCountAfterAt != 1) {
    throw new DotException("DotException: Invalid Dot usage");
}

int lastDotIndex = email.lastIndexOf('.');
String domain = email.substring(lastDotIndex + 1);

if (!(domain.equals("in") || domain.equals("com") || domain.equals("net") ||
domain.equals("biz"))) {
    throw new DomainException("DomainException: Invalid Domain");
}

public static void main(String[] args) {

```

```
Scanner sc = new Scanner(System.in);
String email = sc.nextLine();
sc.close();

try {
    validateEmail(email);
    System.out.println("Valid email address");
} catch (DotException | AtTheRateException | DomainException e) {
    System.out.println(e.getMessage());
    System.out.println("Invalid email address");
}
}
```

Status : Correct
